DETAILED ACTION

Response to Amendment

1. The amendment(s), filed on 07/07/2008, have been entered and made of record. Claims 1-21 are pending.

Response to Arguments

2. Applicant's Appeal Brief filed on 03/23/2009, with respect to the rejection(s) of claim(s) 1-21 under Anderson (U.S. Pat. #6,657,667) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

Allowable Subject Matter

3. **Claims 1-21** are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because the prior art does not teach or fairly suggest a digital camera system comprising:

a processing algorithm that runs on the processing circuitry that:

uses video object tracking to track the overlaid indicia that indicate the overlapping area within the second photograph *as the overlaid indicia moves over the image displayed on the display as the camera is moved to a position to take the second photograph*, which overlaid indicia is used to align and place the second photograph relative to the first photograph, in combination with the other claimed elements.

Claims 2-10 are allowed because claims 2-10 depend from claim 1.

Claim 11 is allowed because the prior art does not teach or fairly suggest a method for use with a digital camera having a lens, an image sensor for sensing an image viewed by the lens,

a display for displaying the image sensed by the image sensor, a storage device for storing the image sensed by the image sensor, and processing circuitry coupled to the display, lens, image sensor, and storage device, the method comprising the steps of:

using video object tracking to track the overlaid indicia that indicate the overlapping area within the second photograph *as the overlaid indicia moves over the image displayed on the display as the camera is moved to a position to take the second photograph*, which overlaid indicia is used to align and place the second photograph relative to the first photograph, in combination with the other claimed elements.

Claims 12-18 are allowed because claims 12-18 depend from claim 11.

Claim 19 is allowed because the prior art does not teach or fairly suggest a method for use with a digital camera having a lens, an image sensor for sensing an image viewed by the lens, a display for displaying the image sensed by the image sensor, a storage device for storing the image sensed by the image sensor, a user interface, and processing circuitry coupled to the display, lens, image sensor, and storage device, the method comprising the steps of:

(6) using video object tracking to track the transparent displayed image *as the transparent displayed image moves across the display in a direction that is opposite to the direction of the subsequent photograph until the transparent displayed image overlaps a predetermined portion of the subsequent photograph that is to be taken*, which overlap is used to align and place the subsequent photograph relative to the photograph, in combination with the other claimed elements.

Claim 20 is allowed because claim 20 depends from claim 1.

Claim 21 is allowed because the prior art does not teach or fairly suggest a digital camera system comprising:

processing means coupled to the display, lens, image sensor, and storage device hat embodies a processing algorithm that:

uses video object tracking to track the overlaid indicia that indicate the overlapping area within the second photograph *as the overlaid indicia moves over the image displayed on the display as the camera is moved to a position to take the second photograph*, which overlaid indicia is used to align and place the second photograph relative to the first photograph, in combination with the other claimed elements.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Soga et al. (US Pat. 806906)

The composition of a photograph to be obtained is decided based upon an assistance frame that can be moved.

Akasawa et al. (U.S. Pat. #6,867,801)

Panoramic image processing which acquires the right end portion of a first sensed image, displays the acquired image along with the image to be captured.

Teo (US Pat. 7,292,261)

A virtual reality camera that overlays a vertical strip from a previous frame onto the current field of view seen on a display.

Stavely et al. (US Pat. 7,349,020)

Displaying image composition templates with preview images.
